* The free daily quota will be reduced over the next several months. We encourage you to explore the Azure Cloud (On Demand) option for higher capacity.

** Premium metadata types.

*** The Intelligent Tagging classification engine supports several hundred Reuters Classification Schema (RCS) topics. Intelligent Tagging assigns topics to your documents using machine learning classifiers trained by dedicated Refinitiv analysts, and optimized for News and Research content. Topics are varied and detailed, and cover a wide range of subjects such as financial markets (equity, fixed income, funds), geographical entities, industries, financial events, economic topics and more.
